Junior skilled and self-motivated PHP backend developer. Always seeking to work on my weaknesses to become a professional in my field, fast learner and relatively nice person. Hoping to use my background and experience to be a part of an organization that utilizes my experiences and skills to achieve its goals.

PROJECTS

SAUDI JOURNALISTS' ASSOCIATION v2.0

Laravel, Vuejs, Nuxt 3

- Refactored the whole website for the next version based on Laravel, Vuejs, and Nuxt 3.
- Both users' app and admin dashboard are completely separated to the backend code. Everything is connected through RESTful API, authenticated with Laravel sanctum.
- Simple blog system implemented.
- 3 different types of users with different authentication / registration schema.
- Events / courses registration for different types of users (Polymorphic relationships implemented)
- Courses registration and simple attendance leads to having a dynamically created certificate in pdf format.
- Technical support tickets and chats.
- Members' annual subscriptions and payment process integrated.
- Full management of users, blog, and courses through admin dashboard. With the ability to export all / filtered data to excel sheets.
- Filtering and sorting all data in admin dashboard
- Dynamic multi role admins management, with the ability to set specific permissions for each type of admins, and the ability to set a specific branch for admins to manage. Which makes them can only manage the users related to this branch.
- Management of courses, questionnaires with ordered questions, and certificate templates that can be managed to be created for each course attendant.
- Refactored database schemas of the old website, copying and refactoring all records to meet the new code.
- Backend Laravel code
- Users' app Nuxt 3 code   (Preview on netlify)
- Admin dashboard Vuejs code   (Preview)

Saudi Journalists' Association v1.0

- Worked on coding the frontend theme of the users site from an adobe xd template file, and connecting it to the backend which was coded by CodeIgniter.
- Built the export to excel sheets functionality in admin panel (codeigniter)
- Built the acceptance process of the members (approved / refused by branch -> accepted / refused by admin -> activated till the successful payment)
- Extended their users to have a new type of volunteers and connecting them to other functionalities of the website.
- Built the technical support system of tickets and chats to every type of user. With its roles managed by admins to make specific technical support moderators.
- Worked on fixing errors and issues existed when I received it.
- Website link

ASSWAT
